— Our mission

Our mission is to create convenient, sustainable & digital parking solutions with businesses for citizens to improve everyone's quality of life.

— What is API?

Familiarize yourself with what you can't see but has a great impact.

- API stands for **A**pplication **P**rogramming **I**nterface.
- It acts as an intermediary. APIs are needed to connect multiple applications together so they can perform the designed functions.
- Removing the human factor from the software interaction process, enables more people to use the data with less effort.

— API for smart cities

COLLECT, CONNECT & CREATE

Real-time data collection is the foundation of the smart city ecosystem. The more data is connected and used, the better services smart cities can provide to their communities. An excellent API enables the creation of a comprehensive and unified data system that automatically adapts to dynamically changing conditions.

— How parking-as-a-service API works?

We can easily integrate our system with your existing parking infrastructure such as barriers or cameras. When a driver wants to enter a parking lot, your parking management system passes on the information to us, which is loaded in the NaviParking backend. After processing the data is visualized in the digital tools created by our company – parking management system for facility managers and mobile application used by drivers.

NaviParking integrates all parking processes into one command center by offering our digital parking API integration with existing parking infrastructure. Thanks to the seamless integration all parking operations are becoming:

- ✓ efficient & sustainable,
- ✓ touchless & cashless,
- ✓ instant & user-friendly.

— Digital parking experience

- ✓ real-time occupancy data,
- ✓ comprehensive financial statistics,
- ✓ parking spot reservations,
- ✓ remote control over parking,
- ✓ seamless third-party integration,
- ✓ mobility and around-parking services.

— What sets us apart?

We have been operating globally since 2015, with offices in Poland, Dubai and Bahrain. We have our own software house and develop products based on clients' expectations. We offer comprehensive marketing services for ongoing projects, strengthening the client's brand. We provide a dedicated account manager for business clients and customer support for individual clients. We support smart cities and CSR concepts and create solutions for people with disabilities.
